

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A beverage making device comprising a brewing chamber, the brewing chamber being defined by an upper wall with one or more holes through which ~~a heated liquid water~~ can enter the brewing chamber, and by a wall of a first removable part having an edge that can abut against said upper wall via first sealing means to form the brewing chamber, said first removable part being provided with outlet means for guiding ~~the heated~~brewed liquid out of the brewing chamber, and a second removable part comprising means for guiding the heated ~~liquid water~~ from said one or more holes to outside the device without contacting said upper wall, which second removable part is interchangeable with said first removable part.

2. (Currently amended) The beverage making device as claimed in claim 1, wherein said outlet means of said first removable part guide the brewed liquid into another chamber.

3. (Currently amended) The beverage making device as claimed in claim 1, wherein said second removable part comprises second sealing means for abutting against said upper wall around said one or more holes and wherein said second sealing means guides the heated ~~liquid~~ water from said one or more holes to outside the device without contacting said upper wall.

4. (Previously presented) The beverage making device as claimed in claim 3, wherein said second sealing means are tube-like members made from a flexible material.

5. (Currently amended) The beverage making device as claimed in claim 1, wherein said second removable part comprises restriction means to limit an amount of heated ~~liquid~~ water passing through said one or more holes beyond what is limited by said one or more holes.

6. (Previously presented) The beverage making device as claimed in claim 5, wherein the restriction means are located near said one or more holes.

7. (Currently amended) The beverage making device as claimed in claim 1, wherein said second removable part comprises means for closing one or more of said holes to restrict the heated ~~liquid~~ water from being guided to outside the device through the closed one or more holes.

8. (Currently amended) The beverage making device as claimed in claim 1, wherein said means for guiding the heated ~~liquid-water~~ to outside the device comprise two outlets for the heated ~~liquid~~water, so that two cups can be simultaneously filled with the heated ~~liquid~~water.

9. (Currently amended) A ~~liquid-water~~ outlet module in the form of a second removable part for a beverage making device comprising a brewing chamber, the brewing chamber being defined by an upper wall with one or more holes through which a heated ~~liquid-water~~ can enter the brewing chamber, and by a wall of a first removable part having an edge that can abut against said upper wall via first sealing means, said first removable part being provided with outlet means for guiding ~~the heated~~brewed liquid out of the brewing

chamber, wherein the ~~liquid-water~~ outlet module comprises means for guiding the heated ~~liquid-water~~ from said one or more holes to outside the device without contacting said upper wall, which said second removable part is interchangeable with said first removable part.

10. (Canceled)

11. (Currently amended) A beverage making device comprising a brewing chamber, the brewing chamber being defined by an upper wall with one or more holes through which a heated ~~liquid-water~~ can enter the brewing chamber, and by a wall of a first removable part having an edge that can abut against the upper wall via a first seal to form the brewing chamber, the first removable part being provided with outlets configured to guide the ~~heated-liquid~~ brewed liquid out of the brewing chamber, and a second removable part comprising one or more tubes configured to guide the heated liquid water from the one or more holes to outside the device without contacting the upper wall, which second removable part is interchangeable with the first removable part.

12. (Currently amended) The beverage making device as claimed in claim 11, wherein the outlets of the first removable part are configured to guide the brewed liquid into another chamber.

13. (Previously presented) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to abut against the upper wall around the one or more holes.

14. (Previously presented) The beverage making device as claimed in claim 13, wherein the one or more tubes are made from a flexible material.

15. (Currently amended) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to limit an amount of the heated liquid-water passing through the one or more holes beyond what is limited by the one or more holes.

16. (Currently amended) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to close one or more of the holes to restrict the heated liquid-water from being guided to outside the device through the closed one or more holes.

17. (Currently amended) The beverage making device as claimed in claim 11, comprising two outlets operably coupled to the one or more tubes, wherein the two outlets are configured to guide the heated liquid-water simultaneously to two separate cups.
